## COMMUNICATION

The European Patent Office herewith transmits as an enclosure the European search report for the above-mentioned European patent application.

If applicable, copies of the documents cited in the European search report are attached.

☒ Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well.

The following specifications given by the applicant have been approved by the Search Division:

☒ abstract

☒ title

☐ The abstract was modified by the Search Division and the definitive text is attached to this communication.

The following figure will be published together with the abstract:

## Patent Abstracts of Japan

PUBLICATION NUMBER : 03262067  
PUBLICATION DATE : 21-11-91

APPLICATION DATE : 13-03-90  
APPLICATION NUMBER : 02059843

APPLICANT : OKI ELECTRIC IND CO LTD;

INVENTOR : SASAKI TOSHIHARU;

INT.CL. : G06F 15/00

TITLE : TERMINAL SYSTEM

ABSTRACT : PURPOSE: To make it possible to omit the input of succeeding passwords and to improve the operability of the terminal system by storing an inputted password in a memory by a password saving function, and when a processing to be drive next is successively selected, restoring the stored password.

CONSTITUTION: When a password is inputted to driven one processing function, the inputted password is stored in the memory by the password saving function. In the case of continuously executing plural processing functions requiring the check of the password, the password stored in the memory is restored by a password restoring function when the processing function to be successively executed after the end of a certain processing function is selected. Since the operator's input of the password is required only for the initial processing function, the input of succeeding passwords is omitted and the operability and processing efficiency of the terminal system are improved.
